

ANNOTATION

Increasing of the ability of artillery recco teams and artillery reconnaissance units in the ACR through the application support.

The research subject is to identify suitable computational processes that are realized during preparation and leading the combat activities by artillery recco teams and artillery reconnaissance units in the ACR. Only the non-covered computational processes in the current softwares will be implemented in the developing first version of unique application. This application will be given to ACR artillery units to gain findings from practice for the next upgrade.
